

Batch – Setting Up Windows Services

Common Batch tools for your scanned or PDF documents

ImageRamp Batch is capable of running as a windows services. To accommodate this, DocuFi includes the AlwaysUp Windows Service Application provided by Core Technologies Consulting.

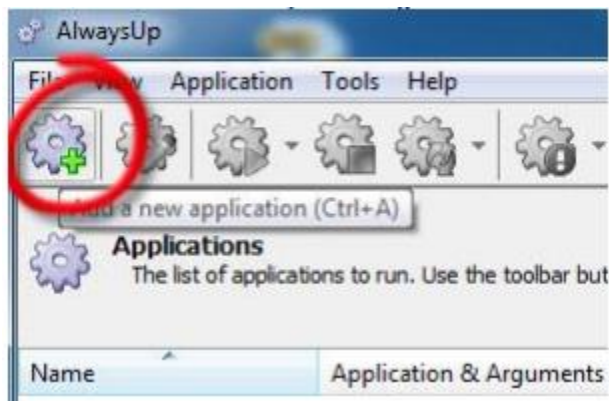

There are two fundamental requirements to enable the windows service.

1. You must have installed the ImageRamp application and obtained a that enables the windows service to function. This service is typically provided with the Professional version of ImageRamp Batch
2. You must install and configure the AlwaysUp 3rd party application. Download this application from http://www.coretechnologies.com/products/AlwaysUp/AlwaysUp_Installer.exe

This document focuses on configuration of the AlwaysUp windows service application.

Run the AlwaysUp application on the desktop of the machine intended to run the windows service. You can find the application on your desktop or in the program files section.

Create a new Service by selecting the New icon in the top panel bar as shown below.

Setting up your ImageRamp Service

From the General tab, identify the name of your new services such as ImageRamp Service.

Next select browse to select the IRampBatchSVR.exe file located in your installation folder. For 32bit environments this is found in c:\Program Files\DocuFi\ImageRamp For 64 bit environments this is found in c:\Program Files (x86)\DocuFi\ImageRamp

In the Arguments text box, enter the string "RUN\$SERVICE" all caps and with the dollar sign replacing the "S". Depending on your specific needs, you can have the service start at machine bootup (Default) or manually. Select the startup method that works best for your organization.

Advanced Settings

Your environment may require additional authentication, error reporting, etc. AlwaysUp is a powerful tool for configuring your application services needs and configure what is right for your environment.

Saving and starting your service

Save your new service and start it by clicking on the start services icon.

Your services can now be seen in your windows Task Manager.
