

Making Healthcare Environmental Services Data Work for You

Getting Started

+Alvia™

©2017 HALvia, LLCi

In our previous presentation, we showed how Environmental Services data can be an infection prevention tool to improve patient safety and increase your reimbursements.

There are numerous thoughts on turning data into intelligence and how to get there.

Let's look at some common themes for turning your data into a predictive analytics platform.

Get the Right Team

Three blue biplanes flying in a diagonal formation from the bottom left towards the top right of the slide. Each plane is leaving a thick white smoke trail behind it. The background is a clear, light blue sky.

Gather a competent team that seeks input from all stakeholders and empower them with tools and authority

Get the Requirements from the Whole Organization

Builds a better solution

Having a voice means greater buy-in and cleaner data

Know Where You Are

What data do you have?

What are the Sources and do you control them?

How is it structured?

Do you have any manipulation tools?

Use the popular Data Maturity Model continuum by Markus Sprenger that describes moving from no usable data to predictive analytics driving strategy.

Determine your Metrics

What is important to you?

What is your end game?

Pick the top metrics that give you the most return and start there

Make Sure you Have Clean Data: Data Governance

Garbage in, garbage out

Make it a priority from the top down

Set data standards across all your
organizations--audit and enforce

Start with Visualization

Implementing visualization tools
is a good starting point.

Start with Visualization

Start by visualizing basic results and correlations over time. This can evolve as more data is captured and correlated into deeper analysis and finally, predictive analytics.
